

**Intelligent mains management (IMM)**

**for water supply systems**

Public offices have to work with tight budgets. When applying for financial, infrastructure organisations such as water supply companies often find themselves in a particularly difficult situation. Their services are taken for granted and the temptation to make savings in the maintenance and renewal areas is great. This means that, on the one hand, the quality of the water supply mains is endangered whilst, on the other hand, liability risks for the water suppliers and their employees are increased. The documentation of the status of the mains system, the acquisition of sufficient funding and the optimal use of those are becoming more and more important in this area.

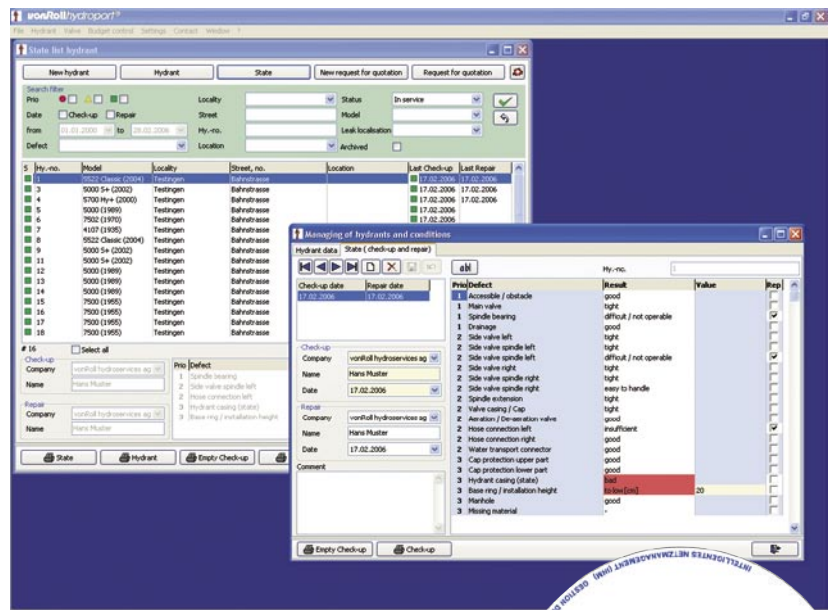

As a long-standing partner of Swiss water-supply organisations, vonRoll hydro has taken up this challenge and, in co-operation with those responsible for water supply, and the vonRoll itec and Wagamet companies, has developed a convincing solution to this problem: **vonRollhydroport®**.

With **vonRollhydroport®** mains-management software, all fire-hydrants and slide-valves in a water supply network can be simply and systematically catalogued along with an illustration and their location, age and state - independent, of course, of manufacturer or service partner. Detailed state-reports and analyses based on virtually any criteria support those responsible for the supply of water in the efficient planning and the convincing budgeting of maintenance work and capital projects. In this way, the quality of water supply networks can be maintained even in times of dwindling financial resources. At the same time, **vonRollhydroport®** provides the basis for complete QS documentation.

As the only IMM software, **vonRollhydroport®** exclusively offers:

- simple data acquisition for fire-hydrants and slide-valves of all manufacturers
- Documentation of control maintenance
- simple, transparent analysis according to virtually any criteria
- Documentation of revision status
- Budget control
- Obtain quotes over the Internet - guaranteed delivery within 2 working days

**vonRoll**hydroport®

Master-data and state of fire-hydrants

The latest CD-ROM with free application program.

- Free updating over the Internet
- Fit for the future with access to all further developments (e.g. data for gas-mains components and leak-location programs)

Using **vonRollhydroport®**- technology, over 50,000 fire-hydrants and slide-valves are already managed today in Switzerland alone, and the system is on the way to becoming a recognised quality and planning standard.

The latest CD-ROM with the **vonRollhydroport®** application pro-

gram as well as further information are available free of charge from vonRoll hydroservices Ltd., ch-4702 oensingen, switzerland.
